

Furnace Self-Diagnosis Check List

Oh no! You've discovered that there is no heat being generated by your furnace. What's your course of action? You won't want to be without heat for very long in the midwest. In the case of an emergency we've compiled a check list you can run through before you call a professional.

- Furnace Filter**
 - Check that your furnace filter is clean and in the proper position.

- Thermostat**
 - Check that your thermostat has power and is set to 'heat'.

- Vents**
 - Check that the vents are open and unobstructed

- Breaker Box**
 - Check that the furnace breaker is flipped on.

- Gas Meter**
 - Check that the gas meter has been turned on by a local provider.
 - This is a common problem when homeowners move into a new house.

- Access Panel**
 - Check that the access panel is properly secured.
 - Some furnaces won't work if the access panel isn't secure.

If you are still without heat, give the pros at Aquarius a call!
